## COFFEE SUPPLY AND DISTRIBUTION IN PRODUCING COUNTRIES, 1960/61-1980/81

This circular is an update of Foreign Agricultural Circular FCOF 4-79, published in August 1979. As noted in that circular, developments in the world coffee economy--especially the severe 1975 frost in Brazil--have increased the need for statistical information relative to the supply and distribution of coffee.

Data on area, tree population, production by type, trade, consumption and stocks cover the 21-year period 1960/61-1980/81 on a crop-year basis. Because crop years for producing countries vary--e.g., beginning in October, April, or July--annual regional and world totals represent the sums of the data for the individual country crop years. The principal case in point would be totals for stocks, which represent the total of stocks for individual producing countries at the beginning and ending of their specified crop years (normally when stocks are at or near their lowest annual level), rather than world stock levels at a particular time.

Some clandestine movements of coffee are known to occur between neighboring producing countries. Because it is virtually impossible to determine the magnitude of these movements, such coffee has been included in the production of the country from which distribution occurs as official exports.

In a few countries, the figures for domestic use include coffee stocks that deteriorated, were destroyed, or were used for nonbeverage purposes during the year. Utilization as such is footnoted. Also, world and regional totals on area, tree numbers, and average yields are not complete, as data for some producers are not available.

Data for 1980/81 are highly preliminary, especially with respect to exports.

The data series were prepared or estimated on the basis of official statistics of foreign governments, reports of U.S. Agricultural Counselors and Attaches, Foreign Service Officers, International Coffee Organization (ICO) statistical bulletins, results of office research, and other related information. They will be updated on a regular basis and published in the periodic FAS circular series. Area statistics are in hectares (2.471 acres), and supply and distribution data are in 1,000 bags of coffee, green bean equivalent (GBE), of 60 kilograms (132.3 lb) each.

---

Information in this circular was prepared by C. Milton Anderson, Horticultural and Tropical Products Division, Commodity Programs, FAS/USDA, Washington, D.C. 20250. Telephone (202) 447-2048.
